

MOBILE EAM EQUIPMENT MAINTENANCE

Overview

Maintenance technicians are often on the move and need quick access to information about assets and equipment repairs, but carrying around a clipboard with a stack of paper work orders is no longer a viable option. Boost productivity and fully utilize the resources dedicated to asset management by implementing barcode and/or Radio Frequency Identification (RFID) technology to mobilize your Enterprise Asset Management (EAM) software.

TouchPath offers automated data collection capabilities to extend the functionality of your EAM (or computerized maintenance management system (CMMS)) systems, providing greater visibility of your assets and the maintenance of those assets, while reducing data entry time and errors.

TouchPath's Asset Visibility with Equipment Maintenance

TouchPath's Asset Visibility with Equipment Maintenance software helps track a multitude of asset types, and through improved asset management and scheduled asset maintenance, you can improve your top and bottom line performance. The software solution captures the tag data from radio frequency identification tags or barcodes automating the linkage between purchase orders, assets, work orders, parts, and maintenance personnel while seamlessly updating the EAM/CMMS system via WiFi or cellular connectivity using a Windows mobile device, smartphone, or tablet.

This solution gives businesses a view in real time of the usage of their corporate assets, including tooling on the production line, totes in the distribution center, equipment in the field, assets assigned by location, or human capital. This valuable information helps businesses improve labor efficiencies—reducing the time employees waste tracking down equipment and parts. Additionally, it reduces capital requirements through more efficient usage of current assets.

Flexible with Existing Systems

In addition to EAM/CMMS, Asset Visibility with Equipment Maintenance can be integrated with corporate fixed asset, maintenance and tool crib systems as well as enterprise resource planning, warehouse management, manufacturing execution and quality control systems. We support multiple data message formats which allows us to rapidly and **flexibly integrate** with back office systems, IP addressable cameras, HID access control, entrance gates, RFID portals, various data collection hardware scanners, printers, and other peripherals, so you can expand on the solution as/when you need to. The software simplifies the infrastructure required to enter, capture and cleanse data and updates all pertinent systems.

In addition, Asset Visibility can notify the user of activities and events defined by the user through e-mail. "Role Based" dashboards enable managers and supervisors to monitor and manage assets while on the go.

ACTIVITY	Process enhanced with TWS
Work Order Reporting	Communicate task details remotely; enable up-to-date work order management
Parts Inventory Management	Issue and track parts and supplies as they are used
Preventative Maintenance (PM)	Scanning equipment and maintaining history verifies the PM was actually performed and by which technician
Corrective Maintenance	Assignment of emergency repairs; review asset's repair history at worksite
Inspection	Perform rounds, readings and inspections; record failure codes; enter comments during inspection
Track Job Time	Monitor technicians activities since system records the scanned locations, equipment, parts retrieval throughout the day
Update EAM and other back office systems	Systems of record are updated automatically without manually entering data or completing paperwork
Asset Audits	Physical or Cycle counts can be performed by simply scanning and validating against back office systems
Compliance	Documented activities assist with OSHA and SOX requirements

Business Payback

The most significant benefits are derived from increased productivity and the ability to collect more data and accurate data, faster. Either directly or indirectly, mobilizing your EAM system can lower budgets, enable you to plan more effectively for the future, and increase your bottom line.

- Reduce/eliminate theft of high value assets
- Reduce/eliminate need to take manual inventory of assets and parts
- Reduce labor and frustration in locating assets
- Reduce service and maintenance of assets
- Reduce down-time related to equipment failure as a result of increased productivity, enabling more preventative and corrective maintenance
- Minimize paperwork and data entry
- Minimize time at the desk, maximizing time in the field
- Increase asset maintenance personnel's productivity
- Increased productivity can be used to reduce or eliminate costly overtime
- The life of an asset can be extended as a result of more timely preventative maintenance
- Increased speed of asset and parts visibility with up-to-date information
- Streamline the flow of data throughout various systems of record
- Meet OSHA and SOX requirements

Features

- Multiple users, simultaneous access
- Transaction History by User and Asset
- Parent/Child relationship location hierarchy
- Graphical Map option to display asset location
- Assign Assets to person/dept/location
- Track Asset maintenance and history
- Unplanned maintenance can be created and scheduled
- Track parts used and inventory availability with minimum re-order limits to reduce out of stock situations
- Areas of operation can be assigned to individual users or group of users
- Reports are displayed in an HTML format that allow for printing on demand
- Export data to Excel (.csv) for further manipulation

About TouchPath

Control at your fingertips!

In the warehouse, distribution center, or on the manufacturing shop floor, TouchPath's solutions streamline your processes and operations. With a single touch, you can capture essential shop floor data, manage warehouse processes and better control your inventory and assets. We believe "one size does not fit all", which is why we deliver custom off-the-shelf (COTS) solutions that support your operations, apply your rules and speak your language. In fact, all our solutions are multi-lingual enabling a standard corporate solution to be rolled out globally with no program changes. With TouchPath, you will make better decisions, gain efficiencies, increase customer satisfaction and boost your bottom line.

TouchPath Solutions

- TouchWMS
- TouchInventory
- TouchMES
- TouchSales (Browser Based)
- TouchERP for Sales (Mobile App)
- TouchAsset
- Equipment Maintenance
- Entrance Control
- Facility Evacuation
- Integration Capabilities – ERP-LX/ BPCS, SAP, Oracle, JDE, M3, MS Dynamics, Werum, LIMS, Legacy Systems, etc.
